Name: Sara Anam
Index No: AMDT_1773

a.

Progressive Web App. I will do a background research on the app requirement, explain all available frameworks and make him understand why PWA's are the most suitable one. Create a wireframe and mockup design to display how the app will look like to convince John.

b.

Native Apps and Hybrid Apps
1. Native apps also can be a good choice as he has no issue with money and time. But it is a waste of time, as he will require professional app developers and spend a lot of money unnecessarily.

2. Hybrid Apps also can be used but since the website is already built it's a hassle to rebuild it to app again where as he can just do a PWA and make his app easily.

c.

As the website has been already developed, and John wants to add more features to the website. Specially request music, chat etc. I suggest he creates a **Progressive Web App**. Thereby he can have the same database and manage both website and app together.

d.

Ability for user to create playlists and save them.

e.
Spotify – PWA
SoundSlice – PWA
